

Exploring the Sculptural Possibilities of Plastic Milk Bottles

By [Andrea Butler](#)

The plastic milk bottle is a flexible, versatile material that can be manipulated to create textured/decorative surfaces and shaped to make 3D forms. Textile and manipulation techniques such as coiling, fringing, knotting and sewing can be applied to create a variety of forms and textures. Many of the techniques were used to make the objects in this resource: [One Material: Sea Sculptures from Plastic Bottles.](#)

The processes shown below can also be applied to explore the decorative and construction potential of other materials.
